# Canadian Says He Can Stop Electronic Telephone Taps

VANCOUVER, B. C. (Cana-

dian Press) — Don Feliks, an amateur inventor, says he has the answer to electronic eavesdropping.

"I figure my invention sets telephone bugging back 25 years," says the former paratrooper who moved here from Detroit in 1960.

Although the British Columbia Telephone Company is not sure about that, the company is in-

terested in a tiny electronic device developed by the 30-year-old inventor.

Mr. Feliks says his telephone

jammer blocks all but the old, conventional tapping where wires are actually attached to telephone lines."

Modern telephone taps are induction coils, which set up a magnetic field to pick up conversations. Mr. Feliks's invention "creates an electrical field far greater, thus jamming the induction coil."

He has two models, one the size of a cigarette pack, the other the size of a cigar box.
